

INTELLIBOT

Cleaning Just Got Easier

- Hands-Free Cleaning®
- INTELLI-TRAK™
- ECOSAVE.

It's now possible to clean twice as much, while doing a better job, for less money.

Hands-Free Cleaning® Operating System

Intellibot's machines are designed for Hands-Free Cleaning®, meaning you can quickly switch from manual to Hands-Free operation at the touch of a button, and just walk away.

Our new operating system enables:

True Multi-tasking:

One person can accomplish twice the work.

Better Cleaning:

The machine consistently cleans the same area, at the same speed, with the same overlapping coverage, every time, every day.

Reduced Cost:

Double, triple or quadruple your productivity without increasing labor; your cost per square foot is dramatically reduced.

INTELLI-TRAKSM

Provides real-time reports telling you who ran the machine, the time it ran, the exact area cleaned, for how long, and if there were problems. You can compare this activity with the previous day, week, quarter, or year.

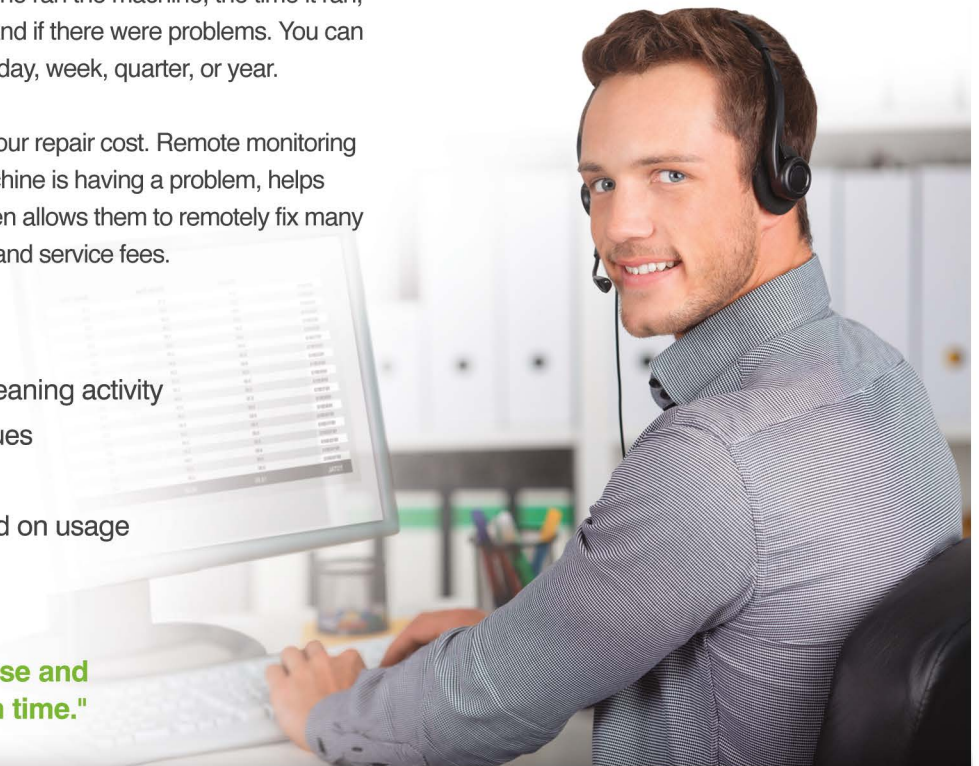

Intelli-TrakSM Monitoring also reduces your repair cost. Remote monitoring alerts Customer Assistance if your machine is having a problem, helps them to diagnose the problem, and even allows them to remotely fix many of the issues. This reduces down time and service fees.

Program Benefits

- **Easier management** of floor cleaning activity
- **Faster response** to service issues
- **Reduced downtime** for repairs
- **Preventive maintenance** based on usage
- **Free software** upgrades

"Faster response and reduced down time."

ECOSAVE.

Intellibot's ultimate green machines reduce, reuse and recycle to eliminate 85% of the water and chemicals used each shift, thus lessen the environmental impact. Our HydroBot[®] and DuoBot[®] have an advanced four-stage purification system that can filter water to one micron, providing clean, reusable water.
